Remote access to central system resources via a web browser is becoming more and more necessary. Qguar 4WEB is a tool that allows to perform a specific set of activities via a web browser, thus offering, among others, remote access to given statuses, remote placement of orders, and performing statistics and analyses. Qguar 4WEB offers also a set of predefined tools that allow to share selected functionality of other Qguar modules via a browser taking specific customer requirements into account. All data can be exported in the form of lists to MS Excel spreadsheets.
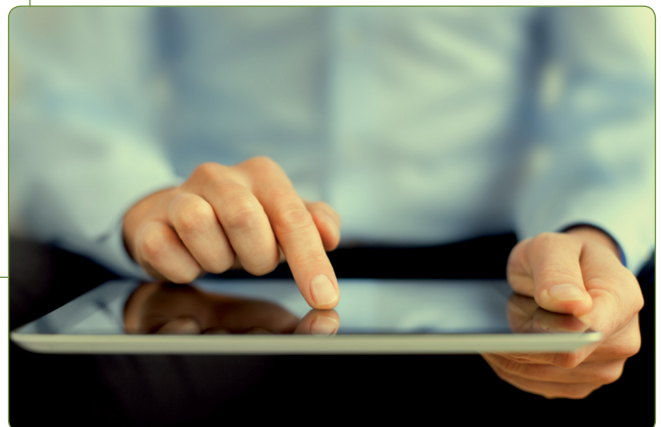

Functional scope

QGUAR 4WEB offers the following functions:

- list of products
- product stock and warehouse contents
- list of customers (companies)
- supply list with the possibility to add new items
- purchase orders
- product returns
- shipment orders with the possibility to add new items
- list of product flow and warehouse inventory
- list of warehouse documents
- data export to MS Excel
- attaching pictures (e.g. to products)
- attaching scanned document copies to logistics operations
- anonymous access to logistics operation status tracking

The functionality of previous Qguar versions may differ and shall be individually determined with customers.

System advantages

- possibility of remote operation from the browser level
- assignment of competences through authorisations
- making specific resources available to customers
- immediate contact with the customer (co-operator)
- reduction in own expenditures for process handling
- increased productivity
- optimization of distribution processes
- supervision of logistic chain links
- modern logistics and IT technologies
- improved customer service quality
- operation in enterprises of any type

Use

As an auxiliary tool for other Qguar systems, Qguar 4WEB can be used almost any time the on-line operation with Qguar system is required. It includes companies that have already been using Qguar system, but also final customers of Qguar system users who shall get access to specific information resources (e.g. for monitoring of order status. Thus, Qguar 4WEB may be used in all types of companies.
